

Resource Software Solution

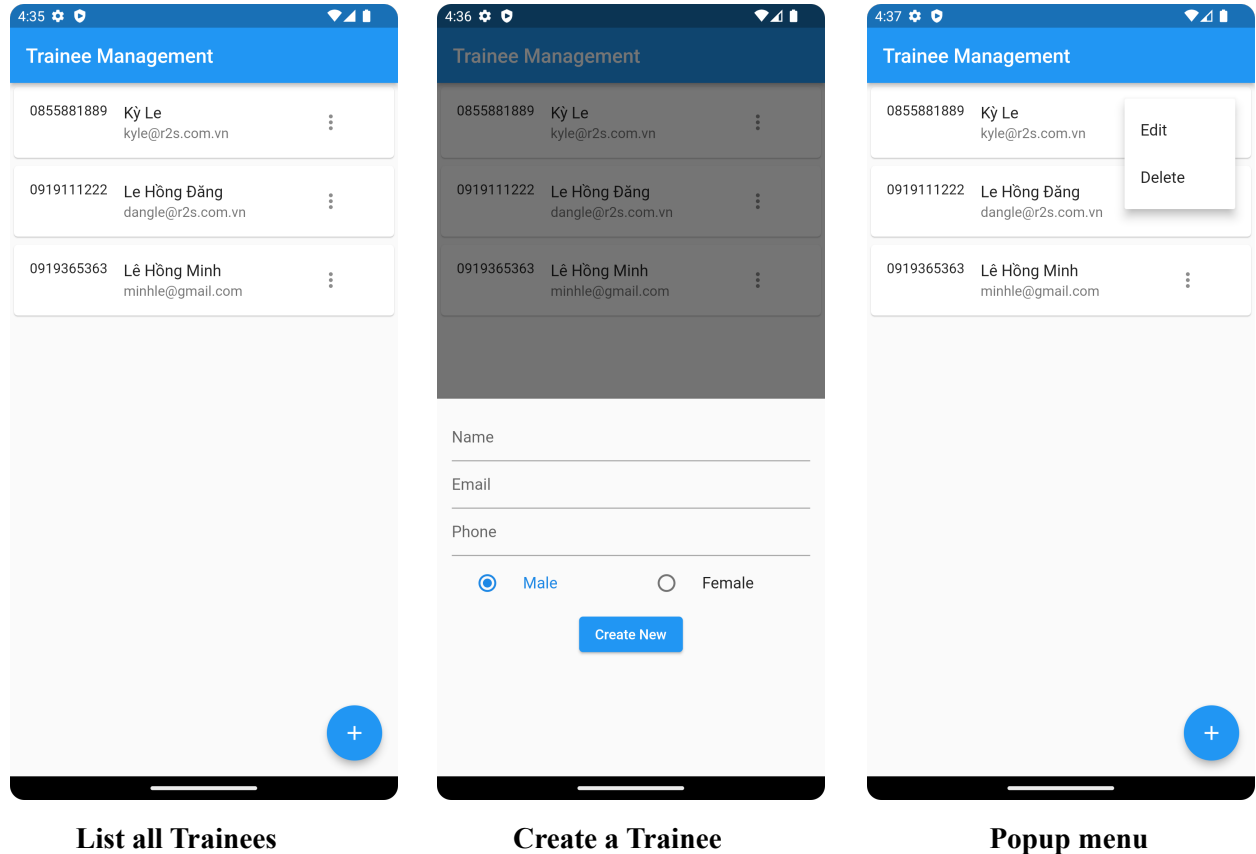

Flutter

Training Assignments

Working with REST APIs (CRUD)

Overview

Build Trainee App and store the task on the real server. We have a flutter application which does all the four common operations like Create, Read, Update, Delete(CRUD).

Tasks

1. Create REST APIs using mockapi (<https://mockapi.io/>)

Schema (optional)

Define Resource schema, it will be used to generate mock data.

| | |
|--------|-----------|
| id | Object ID |
| name | String |
| email | String |
| phone | String |
| gender | String |

2. Build Trainee App and store the task on the real server
